

Instructions

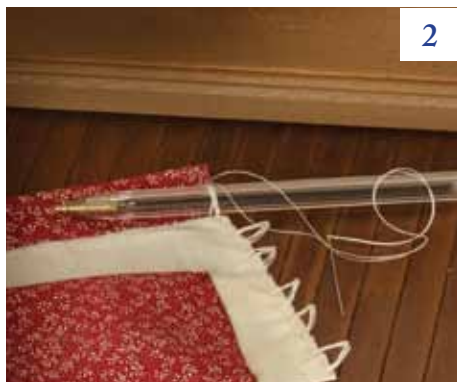

Make your perfect Bed

1

Step 1.

Bed spreads never lay flat, nor look tidy. Using adhesive like glue or blue tac can lead to unsatisfactory results that can be difficult to change later.

2

Step 2.

Using a needle & cotton and a pen or pencil, sew loops along the edge of your bed spread or bed covers as shown.

3

Step 3.

Once completed, thread elasticated chord through the newly created loops as shown and tie off. You could use string or non-elasticated chord, but the elastic gives you far more flexibility.

4

Step 4.

Using this method makes changes to your bed coverings possible, and even better, easy! By using elastic it is then also possible to put a figure in the bed when dressing your room.
